

# User Guide TANDBERG Content Server

Thank you for choosing TANDBERG!

The TANDBERG Content Server provides you with a quick and easy way to record video meetings and view them live or on demand from your computer.

This user guide has been divided into several chapters that you can access by clicking on the chapter titles in menu bar at the top of this page.

The manual is intended for use by two groups of Users:

- Users who have access to the interface to view Live and On Demand conferences and also download recorded content to view on their computer or portable player.
- Owners who have their own Recording Alias to edit, can make calls and manage their recorded conferences.

Our main objective with this user guide was to address the goals and needs of these two groups of users.

Please let us know how well we succeeded!

[www.tandberg.com](http://www.tandberg.com)

## What's in this user guide?

The screenshot displays the TANDBERG Content Server interface. On the left, a video player shows a woman speaking, with a sidebar titled "Leadership Training" listing topics: Problem Solving, Planning, Delegation, Meeting Management, Managing Yourself, "Leading" Versus "Managing", and New Paradigm in Management. The video player shows a progress bar at 00:00:16 / 00:29:19. On the right, the "Recorded Conferences" section features a search bar and a list of four conferences:

Conference Title	Date	Duration	Speaker	Location	Category
Leadership is a Choice CEO Lisa Carr shares her views on leadership and how you can choose to lead everyday.	03 Nov 2008 - 11:09 am	10 minutes	Lisa Carr, CEO	Corporate HQ	Executive Education
Competitive Strategy CEO Lisa Carr discusses OurCorp's long-term strategic strategies.	03 Nov 2008 - 11:09 am	10 minutes	Lisa Carr, CEO	Corporate HQ	Executive Education
Creating a Culture of Innovation This seminar is exclusively for senior executives who can initiate and drive innovation strategies in their organizations.	03 Nov 2008 - 10:51 am	10 minutes	Chris P. Bacon, CIO	Research and Development	Executive Education
Energizing your People for Performance Explores the latest insights in leadership development and motivating people. You will learn valuable people-related strategies to energize your work force and maximize bottom-line results.	03 Nov 2008 - 10:25 am	10 minutes	Barry Cade, VP Human Resources	Employee Lounge 12	Executive Education

At the bottom of the interface, it shows "System Administrator (TANDBERG-68005FAdministrator)" and "TANDBERG Content Server v.-pre alpha 0 Build 0, Copyright © 2008 TANDBERG".

This User Guide is divided into four chapters:

1. [Login](#) to the TANDBERG Content Server.
2. [Viewing Conferences](#): Users have the ability to view the Conference listings, watch Conferences in the Content Viewer and download movies for their Portable Players or download to watch them on their computers.
3. [Creating Conferences](#): Owners can have their own Recording Aliases to manage the Conference Metadata, create ad hoc Conferences from the interface using their own Recording Aliases and System Aliases, Edit Conferences, Manage Outputs after Conference have completed, and also delete old conferences that they no longer want. .
4. [Frequently Asked Questions](#) providing answers to questions often asked when using the Content Server.

### Before you start

You need to know the URL or Address (IP address or DNS name) of your TANDBERG Content Server.

e.g. [mycontentserver/tcs/](http://mycontentserver/tcs/)

You will also need a user name and a password to log in to your TANDBERG Content Server.

Ask your administrator for these.

### Supported Browsers

On your **Windows** Personal Computer, use either:

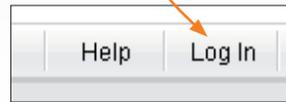

- Internet Explorer 6 or higher
- Mozilla Firefox 2 or higher.

On your **Macintosh** use either:

- Mozilla Firefox 2 or higher
- Safari 2 or higher.

The Content Server web page will be displayed in your browser once you have entered its URL or Address.

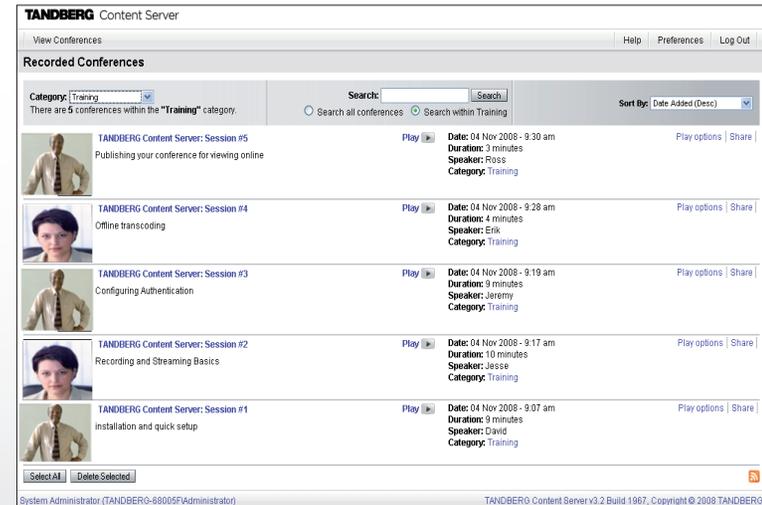

Look for the **Log In** button in the upper right corner. Click on this button to log in.

You will normally be asked for a **user name** and a **password**. These may or may not, be the same as you use to log in to other applications in your company, like e-mail. If in doubt, ask your administrator.

Once successfully logged in, you will see a list of **Conferences** that you have access to.

In this chapter...

Ways to watch a conference Other Options available

Screen options

You can customize what you see on the screen by means of the three sorting options:

**Category:** Conferences can be grouped according to category. Selecting **All** will list every conference you have access to. The conference information also shows what category a conference belongs to.

**Search:** You can enter words or phrases to find the conference you are looking for. You can search on conference name, description, speaker, location and keywords.

**Sort By:** By default, conferences are sorted by date, with the newest one at the top. You can change the order that the conferences are displayed.

Downloading conferences

If a conference has a **Download** option available, clicking the option will allow you to download files for playing on your portable device or on the computer using Windows Media Player, QuickTime Player or RealPlayer.

This way, you can watch the conferences over again without being connected to the Internet or viewing them using the Content Server Viewer.

Playing back conferences in the Content Viewer

The Content Server can determine the best conference to view with your current internet connection.

There are four options to click for playing back the best viewable conference:

1. Conference thumbnail
2. Conference name
3. Play icon
4. Play link

Any of these will launch the content viewer for conference viewing.

Clicking on **Play options** will display the available bandwidths for the conference. Choose one to play.

**Note:** The red exclamation mark indicates your bandwidth has been determined at a lower rate than is necessary to display this conference recording properly. You may experience problems viewing this conference. Check your preferences to see what the setting is.

In this chapter...

- ▶ Screen options
- ▶ Conference lists
- ▶ Setting preferences
- ▶ Viewing conferences

The Arrows (< and >), page numbers and the Next 10 and the Prev 10 lets you navigate the screens.

Clicking on Help...

... will produce this icon. Click any icon to display context sensitive help for that item.

... and the Go to User Guides link will be displayed. Click on this to go to the TANDBERG Content Server Administration Manual and User Guide.

Navigating the screens

**Note:** You will only see conferences that you have access to.

**Navigation.** If you have lots of available conferences, you can navigate the screens by clicking on the page numbers or the forward arrow to advance one page at a time.

When there are more than 10 pages of information, the next 10 pages link will appear after the Next arrow. Click on the Next 10 and Prev 10 links to move between the pages in groups of 10.

**Help:** Click on Help to switch on Online Help and you will see ? icons next to items on the page. Click the icons to get additional assistance on these items.

When Help is turned on, the Go to User Guides link will be displayed. Click this to take you to the TANDBERG User Guides. You can download user documentation from this page.

Conference lists

There are two conference lists that users have access to:

1. **Recorded Conferences**—these conferences have completed and are ready to play and download. If you see the icon , it means that the conference is still being processed, so not all of the outputs are available just yet.
2. **Live Conferences**—these are happening now and can be watched live if there is a Play icon. If not, you will have to wait until after the conference has finished and processed to watch the conference from the Recorded Conferences List.

### Edit User Preferences

#### User Details

User Name	User1
Role	user
Display Name	<input type="text" value="User"/>

#### User Preferences

Items Per Page	<input type="text" value="20"/>
Category	<input type="text" value="All"/>
Automatically determine my internet speed	<input checked="" type="checkbox"/>
Speed	<input type="text" value="Maximum"/>

#### Client Environment

Windows Media	✔
QuickTime	✔
Real Media	✔
Javascript	1.7
Re-check Client Environment	<input type="button" value="Re-check Client Environment"/>

## Setting Preferences

Click this to change some of your own display options, such as your display name, number of items shown per page, categories, the viewing speed of the conference to watch and to check your Client Environment.

## Preferences

You can change the following:

**Display Name**—displayed at the bottom left of the screen

**Items Per Page**—the number of conferences on a page. Can be 5, 10, 20, 50 or 100, with the default set to 20.

**Category**—when you login, this category will be selected and conferences belonging to this category will be displayed.

**Automatically determine my internet speed**—the Content Server will automatically play the largest available conference size you will be able to watch. This selection is based on your Internet connection speed detected at login or after re-checking your client environment.

**Speed**—you can override the automatic detection setting by deselecting Automatic (above) and selecting the speed of conferences to watch. Choose the Speed appropriate to your current Internet connection.

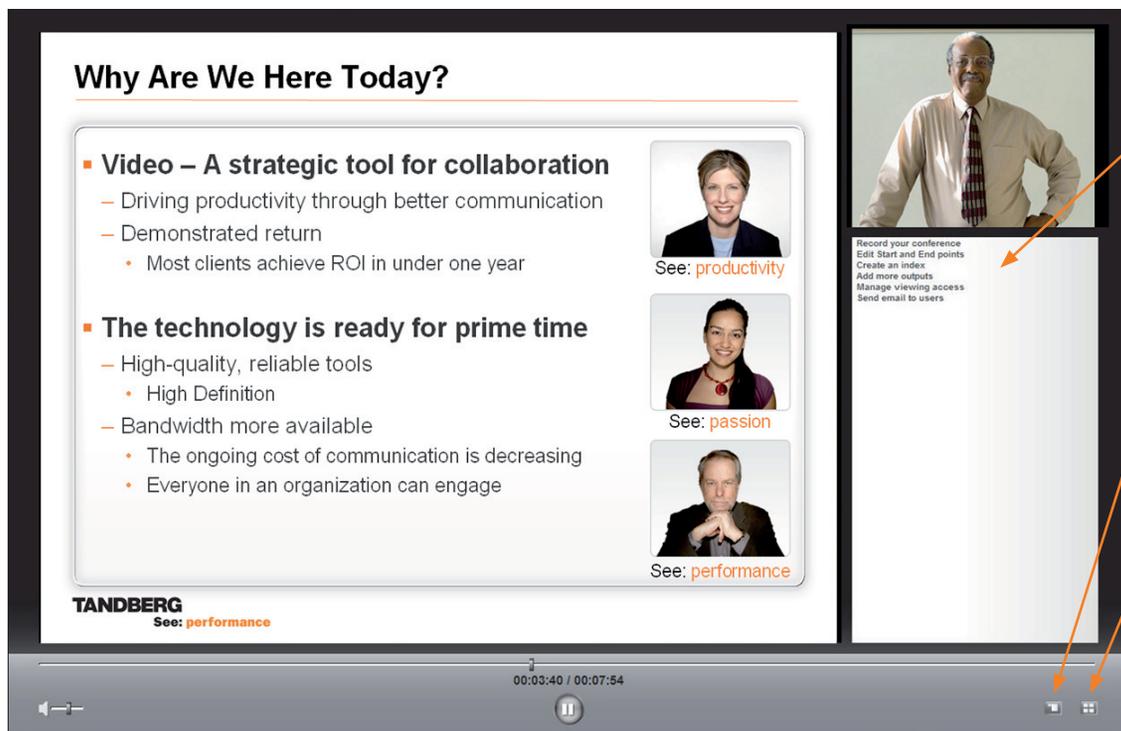

**Note:** If a conference is not available in the size equal to or greater than the size selected, the Content Viewer will pick the size which will give you the best viewing experience when clicking on one of the four play options from page 4.

If your Internet connection is too slow, or the conferences available are less than the size specified in your preferences, you will see a bandwidth warning in the interface  warning you that your Internet connection may be too slow to display the video properly. You are not prevented from watching the conference but will have to use the Play Options to select a conference with a higher bandwidth than size specified.

**Client Environment** – Displays whether or not Windows Media, QuickTime and Real Media are available for the current browser on your computer as well as the version of Javascript used. A red exclamation mark will indicate that Conferences using that Format will not be available for viewing.

In this chapter...

- ▶ Screen options
- ▶ Conference lists
- ▶ Setting preferences
- ▶ Viewing conferences

Viewer items

**Indexes**—created by a conference editor to make it easier for users to find what they are looking for while viewing a conference. They are displayed in the viewer window and clicking on an index will advance the conference to that point in the conference.

**Next Layout** —clicking will toggle through the different layouts available for the conference. The icon displays the next layout available. The number of layouts will depend on the layout of the conference and also whether the conference has indexes or not.

**Slide List** —displays the still images taken of the dual stream for an Audio or a Small Video sized Conference. For larger video sizes, the video stream of the presentation will be viewed instead of the still images.

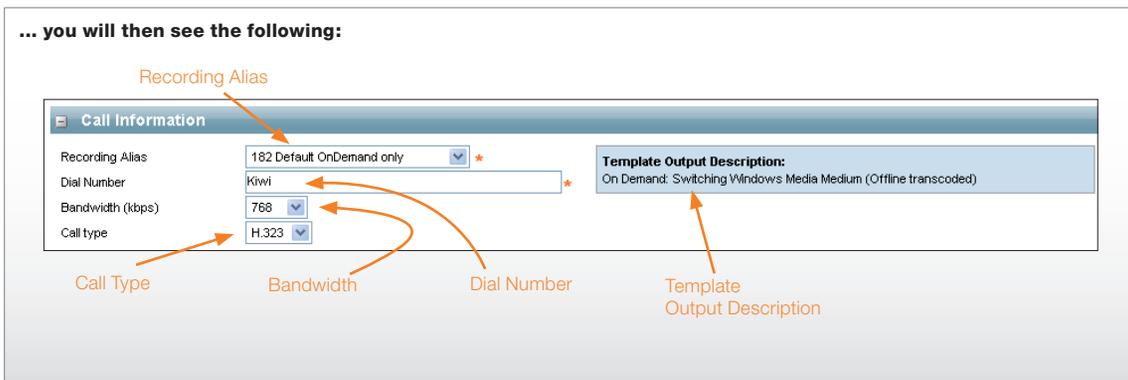

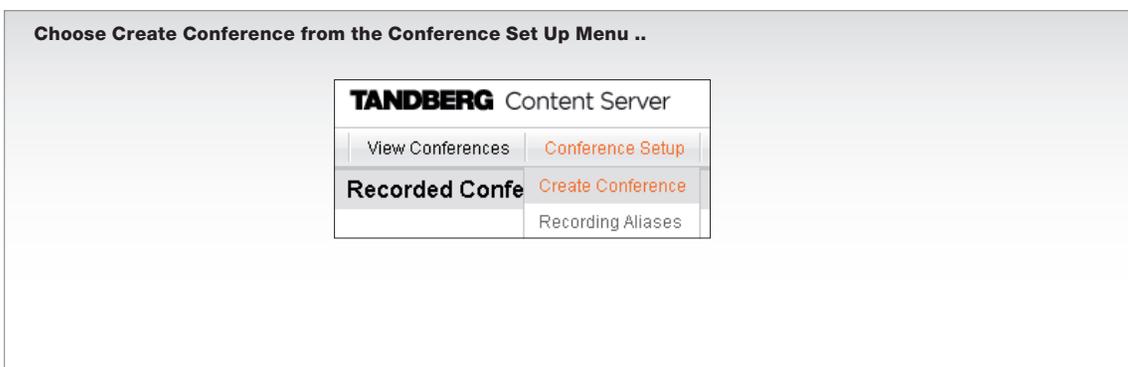

**Closing the Window**—Click the  at the top right of the window to close it.

Viewing conferences

When you click on a conference to view, the viewer will be displayed. This example shows a conference with the two video layout, indexes added and icons indicating there are more layouts available and also some slides generated during the conference.

In this chapter...

- ▶ Call Information
- ▶ Permissions
- ▶ Metadata
- ▶ Manage outputs
- ▶ Editing viewer

Call information

**Recording Alias**—Choose the recording alias to use. Your Administrator will have given you your own Personal Recording Alias to use or will advise you which System Recording Alias to use.

Select an "alias for live streaming" if the conference is to be viewable live, or immediately after it has finished. Conferences recorded with 'non-live streaming' aliases will not be available for viewing until their outputs have been processed. How soon your recorded-only calls will be available for viewing will depend on how many other conference outputs the Content Server is processing at the time or how many calls are in process. You can see if outputs for your conference are being processed from the **Pending** list from the **View Conferences** menu.

**Template Output Description**—Displays the outputs the Recording Alias will create.

**Dial Number**—The number of the endpoint you want to call to initiate a recording of the conference using the template selected.

**Bandwidth**—Connection speed for recording the call.

**Call Type**—H.323 or SIP.

Creating conferences on the TANDBERG Content Server

The Create Conference option is available from the Conference Setup menu for owners but not users. If you have Owner Privileges, you can make ad hoc recordings from the interface.

In this chapter...

- ▶ Call Information
- ▶ Permissions
- ▶ Metadata
- ▶ Manage outputs
- ▶ Editing viewer

Permissions

**Allow access to all users.** Select to give all Content Server users permission to view this conference.

**Users.** If **Allow access to all users** is not selected, and you want to restrict access to your conference, enter user names, or group names one per line in the Users text box.

**Editors.** To give **users** the ability to edit as well as view your conference, enter their user names in the **Editors** text box.

**Password.** To further restrict streaming access to this conference, enter a password.

All users specified above will be able to see the conference listing, but only those that know the password will be able to view it.

**Note:** Conference permissions created before the conference starts (either from editing the Recording Alias or from the interface when making a call) are used for live viewing and permissions. Edit the conference after the call has completed to change permissions for on demand viewing.

Conference permissions

They define and list users who can watch the conference (live and on-demand) and users who can edit the conference after it has completed.

Observe that you may also grant watching access to all users who have access to the Content Server by checking the **Allow access to all users** check box. This means that anyone who has access to the Content Server will be able to view the Conference, Live and On Demand.

## In this chapter...

- ▶ Call Information
- ▶ Permissions
- ▶ Metadata
- ▶ Manage outputs
- ▶ Editing viewer

Conference Metadata	
Name	Managing Outputs for a Conference
Description	Learn how to delete, change and add Outputs to a Conference once it has been completed.
Speaker	Ross
Location	Hamilton, New Zealand
Copyright	TANDBERG 2009
Keywords	Content Server, Manage Outputs

## Conference metadata

Users can display conferences belonging to a particular **Category** and can search on text entered into the **Name**, **Description**, **Speaker** and **Keywords**.

If you have your own **Personal Recording Alias**, you can set up the **Permissions** and **Metadata**, and when the **Alias** is used, the information will be copied into the conference. This is very important for Live Calls as the permissions cannot be changed once a Call is live.

You may also choose between the thumbnails available for the conference.

### Changing thumbnail

To change the thumbnail, select another one by clicking on it and then click the Save button.

Conference Thumbnails

Save Return Content Editor Add Outputs

## Adding metadata to make the conference easier to locate

Entering metadata makes it easier for users to find the conference, for both live and on demand.

**In this chapter...**

- ▶ Call Information
- ▶ Permissions
- ▶ Metadata
- ▶ Manage outputs
- ▶ Editing viewer

The image shows two screenshots from the Tandberg Content Server interface. The top screenshot is the 'Edit Conference' page, which has buttons for 'Save', 'Return', 'Content Editor', and 'Manage Outputs'. An arrow points from the 'Manage Outputs' button to the 'Manage Outputs' option in a dropdown menu. The bottom screenshot is the 'Manage Outputs' page, which includes sections for 'Output Viewing Options', 'Content Viewer', 'Output Layout', and 'Movie Settings'. Annotations with arrows point to specific elements: 'Extra outputs types are selected here' points to the 'Create movies for the Content Viewer' checkbox; 'The original Layout can be changed when extra outputs are added. The previous conference layout will be deleted.' points to the 'Two videos' radio button; 'The original Format can be changed or an extra one added. Deselecting a Format will delete the output.' points to the 'Windows Media' format selection; and 'Only 2 sizes can be chosen for Viewer and Download' points to the 'Small' and 'Medium' conference size options.

**Manage outputs.**

Click the **Manage Outputs** option from either the **Edit link** or the **Edit Conference** page, for conferences you have access to.

Select the options from the **Output Viewing Options** to access the different types of outputs.

Then select options to create other movies for viewing in the Content Viewer, for Portable Devices, for Download on your Computer or for Distribution to iTunes U or through PodCast Producer.

A recorded conference can have more outputs added but also, outputs that are no longer needed can be deleted and previously chosen layouts, formats and sizes can now all be changed.

**Tip!** Some things to note when Managing Outputs:

- The original Layout can be changed
- Only 2 sizes can be chosen for Viewer and Download
- Only on-demand outputs will be created
- Deselecting existing outputs will delete them
- The total number of outputs once a conference has been recorded can exceed the limit of 6 imposed on new templates
- Adding Outputs will put an added load on the TANDBERG Content Server
- The Conference Outputs will be added into the Pending Queue for processing and will start when all the preceding Conferences have been processed.
- Outputs sent to external servers, for example, Podcast Producer or QuickTime Streaming Server, will not be deleted off the external servers. Changing a distribution output or a media server will add a new output and send it to the new server. Previously created outputs on external servers can be manually deleted if required.

**Managing outputs**

Owners and editors can delete and add outputs once the conference has completed. The layout, format or size may not be the best option for viewing, so this can be changed. The downloadable files may need to be changed or added to for your users.

In this chapter...

- ▶ Call Information
- ▶ Permissions
- ▶ Metadata
- ▶ Manage outputs
- ▶ Editing Conferences

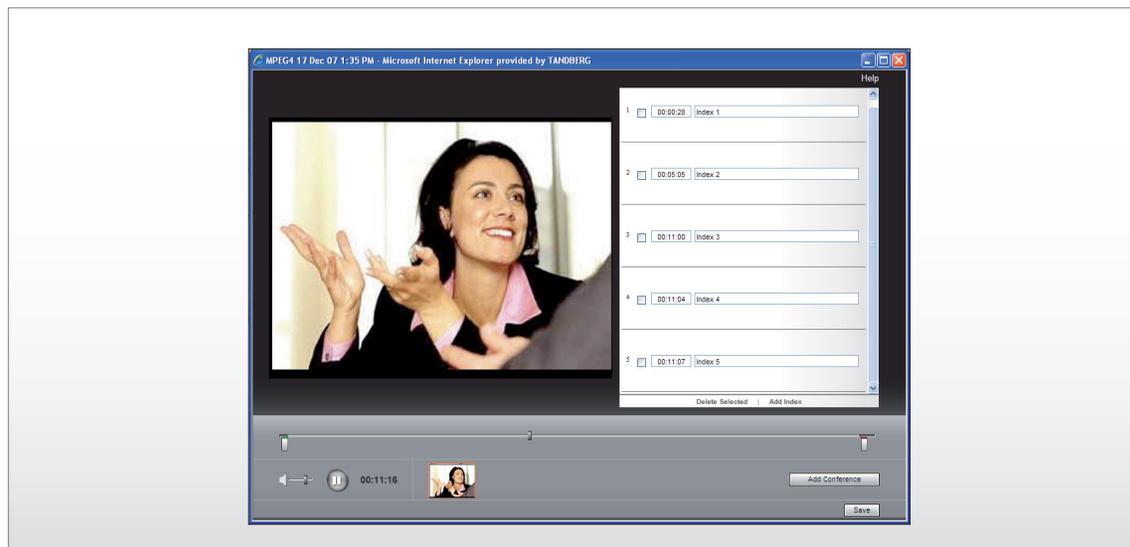

Access the Content Editor is from the [Edit](#) link and also from the [Edit Conference](#) page. These options are only available for users with edit privileges for a conference.

Use the Content Editor to change the following for conferences that are viewed by the Content Viewer:

- Change the Start or End time of a Conference.
- Add Index points in the Conference to make it easier for Users to find the content they want.
- Add another Conference to the currently edited one.

**Note:** Click the help link to find out about the different options in the Content Editor.

**Editing Conferences for the Viewer:**

Use the editor to:

- Change start and end times of a conference
- Add indexes so users can easily navigate through the content
- Add another conference to the currently edited conference.

### Do I need to log in before I start using the TCS?

If the Content Server has **Guest Access** enabled, no registration is necessary. Conferences that are available for all users when Guest Access is enabled can be viewed by anyone with access to the URL.

If **Guest Access** is not enabled, users need a user name and password to access the Content Server.

### What are the differences between Users, Owners and Editors?

**Users** are only able to view Live and On Demand Conferences that they have access to as well as download any files for these conferences, when they are ready.

**Owners** can make ad hoc calls from the Interface and can also have their own Personal Recording Aliases to edit the Conference Permissions and Metadata for a Live call and then edit the Conference after the call has finished.

**Editors** (and Owners) can edit a conference after it has completed. They can change Conference Permissions, Metadata, and Thumbnails, the content through the Content Editor, and manage Outputs for the conference. They can also delete Conferences from the Recorded Conference listing.

### How can I find it? Is it in the phonebook?

If your Content Server has been added to TANDBERG Management Suite (TMS) you can book your conference in TMS and select a Recording Alias to record the conference. Owners of a recording Alias can use it to schedule conferences using TMS. TMS will also provide a link to view the Live and Recorded Conference.

### Must things be set up in advance?

It is best to have your Personal Recording Alias setup in advance so Live viewers can watch the conference as it happens and users can view the conference after it has completed and the outputs have been created. Owners can also remove access to conferences they are creating until they are ready to be viewed.

### Can I / How do I do ad hoc recordings?

Any User who is also an Owner, whether they have a Personal Recording Alias or not, can make ad hoc calls from the interface using the available System Recording Aliases. From an endpoint users can dial the TANDBERG Content Server if they have been given an Alias number to dial. If they are not using their own personal alias and if they are not in the Edit list for the Conference, they will not be able to see or edit it once the conference has started.

### How can everyone involved be informed that this meeting is being recorded? Does the system tell us?

The endpoint in the recorded call will display a poster to tell users that the call is being recorded. In a multisite call, the poster will be displayed as one of the participants in the conference.

### How can we inform users to watch a Live or previously Recorded Conference?

An e-mail can be sent from the Interface once the conference has started recording. If the call has been scheduled using TMS, it will be listed and the link will take users to the Live or Recorded Conference in the Viewer once it has started.

### How do I stop an ongoing recording?

A recording can be stopped from the interface or by ending the call from the endpoint in the call.

### What editing options do I have for the recorded material?

**Editors** can change the start or end time of a conference, add Index points in the conference to make it easier for users to find the content they want and add another conference to the currently edited one.

Downloadable files cannot be edited only outputs viewable using the Content Viewer.

### How do I make the recorded material available to other people? Password protection etc.

Use the **Permissions** section of the Recording Alias or Conference to make conferences available to others. If it is password protected, they need to know the password to view or download the Conference.

### How do I erase recorded material?

**Editors** can delete conferences and all associated data and individual outputs can be deleted and new ones created. i.e. if an iPod download has been created, it can be deleted by deselecting it using the **Manage Outputs** option. Outputs that have already been downloaded will not be deleted.

### The layout is not what I wanted, how do I change it?

Use the Manage Outputs option and the layout, format and sizes can now be changed after the Conference has completed. Previous outputs will be deleted.

### Can a user manage their own recordings?

The best way is to get the Administrator to make a User an **Owner**, then create them a Recording Alias so they can use it to make calls and manage the access, metadata and outputs for each call.

### Who has access to Manage Outputs?

Any user who has **Editor** access to a Conference can manage outputs for the conference. That means an Editor can delete unwanted outputs and create new ones. Owners can make any User an Editor of a Conference.

### What is the difference between Play and Play Options?

Clicking Play selects the highest bandwidth available for your current internet connection (check out your Preferences). Play Options lists all available outputs so the user can select which one to play.

### Can Windows Media content be played on a Macintosh?

Yes, but the following are needed. Mac System 10.5 or higher, Microsoft Silverlight 2.0 or higher, Mozilla Firefox or Safari. Microsoft Silverlight plugin for MacOS is available as a free download at the time of publishing this user guide from:

<http://silverlight.net/>

### Can I play back Windows Media Content using Firefox on my PC?

Yes, but Mozilla Firefox browsers require a special Microsoft Windows Media Player plugin to be installed to display movies in Windows Media® WMV Format.

The following Microsoft Windows Media Player Plugin for Mozilla Firefox has been tested and is available as a free download at the time of publishing this user guide from:

<http://port25.technet.com/pages/windows-media-player-firefox-plugin-download.aspx>
